Index to Volume 157

Age, evolutionarily stable, at first reproduction, in a density-dependent model, 253
Alleles affecting enzyme activity, the population genetics of, 305
Alveoli in rat lung, a model of postnatal formation of, 427
Ant, *Leptothorax acervorum* (Fabricius), autosynchronization; theory, testability and experiment, 71
AOKI, I., Entropy physiology of swine—a macroscopic viewpoint, 363
ARBIB, M. (see COBAS, A.), 271
Autosynchronization of the ant *Leptothorax acervorum* (Fabricius): theory, testability and experiment, 71
AWERBUCH, E. (see SANDBERG, S.), 203

BARRATT, M. E. J. (see PARRY, S.), 407
Bees and flowers in a two-sided pollination market, constraint rules matching between; foraging graphs, 191
Birds flying in formation: theoretical model of the optimum flock size, 135
BLAKE, R. W. (see KSHATRIYA, M.), 135
BLANCO, L. N., A model of postnatal formation of alveoli in rat lung, 427
Branching pattern formation, neurite; modeling and computer simulation, 463

Catalytic structure of a mitochondrial RNA transcript, role of the *in vivo* environment in shaping of, 487
Chickens, modelling coccidial infection in; emphasis on vaccination by in-feed delivery of oocysts, 407
CLAYTON, D. H., PRUETT-JONES, S. G. and LANDE, R., Reappraisal of the interspecific prediction of parasite-mediated sexual selection: opportunity knocks, 95
CLOBERT, J. (see FERRIÈRE, R.), 253
COBAS, A. and ARBIB, M., Prey-catching and predator-avoidance in frog and toad: defining the schemas, 271
Coccidial infection in chickens: emphasis on vaccination by in-feed delivery of oocysts, 407
COOKE, T. J. (see VITS, H.), 221
Coupled-oscillator model of ovarian-cycle synchrony among female rats, 317
CRONHJORT, M. B. (see NYBERG, A. M.), 175

Density-dependent model, evolutionarily stable age at first reproduction in, 253
Density regulated populations, kin selection in, 447
Development, embryo, in dicotyledonous plants: a morphogenetic model, 221
Digestion and passage models, simulation of traditional and optimal schedule designs for, 109
DIXON, A. F. G. (see KINDLMANN, P.), 535
DNA strands, lagging and leading, disparity in the frequency of strand-specific misreading between, and enhanced accumulation of mutations; promotion of evolution (letter), 127
DOI, H. (see FURUSAWA, M.), 127

ELLNER, S. (see PELEG, B.), 191
Embryo development in dicotyledonous plants; a morphogenetic model, 221
Entropy physiology of swine—a macroscopic viewpoint, 363
Environment, constant, limited, optimal somatic growth and reproduction in, 31, 51
Environment, *in vivo*; role in shaping the catalytic structure of a mitochondrial RNA transcript, 487

Enzyme activity, kinetics of substrate reaction during irreversible modification of, where the modifier is not in great excess of the enzyme, 505
Enzyme activity, the population genetics of alleles affecting, 305
Evolution, intron; a statistical comparison of two models, 175
Evolutions, molecular, applied, 1
Evolution promotion: disparity in the frequency of strand-specific misreading between the lagging and leading DNA strands enhances disproportionate accumulation of mutations (letter), 127
Evolutionarily stable age at first reproduction in a density-dependent model, 253
Evolutionary stochastic model of molecular sequences, 83

FADEL, J. G., Simulation of traditional and optimal sampling schedule designs for digestion and passage models, 109
Female rats, a coupled-oscillator model of ovarian-cycle synchrony among, 317
FERNÁNDEZ, A., A parallel computation revealing the role of the *in vivo* environment in shaping the catalytic structure of a mitochondrial RNA transcript, 487
FERRIÈRE, R. and CLOBERT, J., Evolutionarily stable age at first reproduction in a density-dependent model, 253
FIALKOWSKI, K. R., Sympatric speciation: a simulation model of imperfect assortive mating, 9
Flock size, optimum, of birds flying in formation; a theoretical model, 135
Flowers and bees in a two-sided pollination market, constraint rules matching between; foraging graphs, 191
Foraging graphs: constraint rules matching between bees and flowers in a two-sided pollination market, 191
FRANKS, N. R. (see TOFTS, C.), 71
Frog and toad, prey-catching and predator-avoidance in; defining the schemas, 271
FURUSAWA, M. and DOI, H., Promotion of evolution: disparity in the frequency of strand-specific misreading between the lagging and leading DNA strands enhances disproportionate accumulation of mutations (letter), 127

GARCÍA MESEGUER, M. J. (see HAVSTEEN, B. H.), 523
GARCÍA-MORENO, M. (see HAVSTEEN, B. H.), 523
Genetic equilibria with an uneven sex ratio; a general approach, 373
Genetics, population, of alleles affecting enzyme activity, 305
GROSS, L. J. (see KINDLMANN, P.), 535
Growth rates, individual and population, the relationship between, in multicellular organisms, 535
Growth, somatic, optimal, and reproduction in a limited constant environment: organisms with determinate growth, 31
Growth, somatic, optimal, and reproduction in a limited constant environment: the general case, 51

HASTINGS, I. M., The population genetics of alleles affecting enzyme activity, 305
HATCHER, M. (see TOFTS, C.), 71
HAVSTEEN, B. H., VARÓN CASTELLANOS, R., MOLINA, M., GARCÍA MESEGUER, M. J., VALERO, E. and GARCÍA-MORENO, M., Kinetic theory of the action in lipases, 523
HU, W.-S. (see VITS, H.), 221

Infection, coccidial, in chickens; emphasis on vaccination by in-feed delivery of oocysts, 407
Intron evolution: a statistical comparison of two models, 175

JONES, S. (see PARRY, S.), 407

KAUFFMAN, S. A., Applied molecular evolutions, 1
KELLY, J. K., Kin selection in density regulated populations, 447
Kin selection in density regulated populations, 447
KINDLMANN, P., DIXON, A. F. G. and GROSS, L. J., The relationship between individual and population growth rates in multicellular organisms, 535
Kinetics of substrate reaction during irreversible modification of enzyme activity where the modifier is not in great excess of the enzyme, 505
Kinetic theory of the action of lipases, 523
KSHATRIYA, M. and BLAKE, R. W., Theoretical model of the optimum flock size of birds flying in formation, 135

LANDE, R. (see CLAYTON, D. H.), 95
Leptothorax acervorum (Fabricius)(ant) autosynchronization; theory, testability and experiment, 71
LI, G.-H., QIN, C.-D. and WANG, Z.-S., Neurite branching pattern formation modeling and computer simulation, 463
Life cycle of the tick that transmits the agent of Lyme disease: a comprehensive multiple matrix model, 203
Lipases, kinetic theory of the action of, 523
Lung, rat, a model of postnatal formation of alveoli in, 427
LUO, L. and TRAINOR, L. E. H., A stochastic evolutionary model of molecular sequences, 83
Lyme disease, a comprehensive multiple matrix model representing the life cycle of the tick that transmits the agent of, 203

MCCLINTOCK, M. K. (see SCHANK, J. C.), 317
MCKEE, S. (see PARRY, S.), 407
Mating, assortative, imperfect, a simulation model; sympatric speciation, 9
Memory windows, patch estimation via, and the effect of travel time, 243
MILCHTAICH, I., A general approach to genetic equilibria with an uneven sex ratio, 373
Misreading, strand-specific, between the lagging and leading DNA strands, and disproportionate accumulation of mutations; promotion of evolution (letter), 127
Mitochondrial RNA transcript, role of the *in vivo* environment in shaping the catalytic structure of, 487
Molecular evolutions, applied, 1
Molecular sequences, a stochastic evolutionary model of, 83
MOLINA, M. (see HAVSTEEN, B. H.), 523
Morphogenetic model for embryo development in dicotyledonous plants, 221
Multicellular organisms, the relationship between individual and population growth rates in, 535
MURRAY, J. D. (see PARRY, S.), 407
Mutations, disparity in the frequency of strand-specific misreading between the lagging and leading DNA strands enhances disproportionate accumulation of (letter), 127

Natural selection and dynamical coexistence of defective and complementing virus segments, 383
Neurite branching pattern formation: modeling and computer simulation, 463
NYBERG, A. M. and CRONHJORT, M. B., Intron evolution: a statistical comparison of two models, 175

Oocysts, vaccination by in-feed delivery of; modelling coccidial infection in chickens, 407
Organisms, multicellular, the relationship between individual and population growth rates in, 535
Ovarian-cycle synchrony among female rats; a coupled-oscillator model, 317

Parasite-mediated sexual selection, reappraisal of the interspecific prediction of, 95
PARRY, S., BARRATT, M. E. J., JONES, S., MCKEE, S. and MURRAY, J. D., Modelling coccidial infection in chickens: emphasis on vaccination by in-feed delivery of oocysts, 407
Patch estimation via memory windows and the effect of travel time, 243
PELEG, B., SHMIDA, A. and ELLNER, S., Foraging graphs: constraint rules matching between bees and flowers in a two-sided pollination market, 191
Physiology, entropy, of swine; a macroscopic viewpoint, 363
Plants, dicotyledonous, a morphogenetic model for embryo development in, 221
Pollination market, two-sided, constraint rules matching between bees and flowers in; foraging graphs, 191
Populations, density regulated, kin selection in, 447
Population genetics of alleles affecting enzyme activity, 305
Population and individual growth rates, the relationship between, in multicellular organisms, 535
Postnatal formation of alveoli in rat lung, 427
Prey-catching and predator-avoidance in frog and toad: defining the schemas, 271
PRUETT-JONES, S. G. (see CLAYTON, D. H.), 95

QIN, C.-D. (see LI, G.-H.), 463

Rat lung, a model of postnatal formation of alveoli in, 427
Rats, female, a coupled-oscillator model of ovarian-cycle synchrony among, 317
Reproduction, first, evolutionarily stable age at, in a density-dependent model, 253
Reproduction in a limited, constant environment: the general case, 51
Reproduction in a limited, constant environment: organisms with determinate growth, 31
RNA, mitochondrial, transcript, role of the *in vivo* environment in shaping the catalytic structure of, 487

Sampling schedule designs for digestion and passage models, simulation of, 109
SANDBERG, S., AWERBUCH, E. and SPIELMAN, A., A comprehensive multiple matrix model representing the life cycle of the tick that transmits the agent of Lyme disease, 203
SCHANK, J. C. and MCCLINTOCK, M. K., A coupled-oscillator model of ovarian-cycle synchrony among female rats, 317
Selection, kin, in density regulated populations, 447
Selection, natural, and dynamical coexistence of defective and complementing virus segments, 383
Selection, sexual, parasite-mediated, reappraisal of the interspecific prediction of, 95
Sequences, molecular, a stochastic evolutionary model of, 83
Sex ratio, uneven, a general approach to genetic equilibria with, 373
Sexual selection, parasite-mediated, reappraisal of the interspecific prediction of, 95
SHMIDA, A. (see PELEG, B.), 191
Size, optimum, flock, of birds flying in formation; theoretical model, 135
Somatic growth and reproduction in a limited, constant environment: the general case, 51
Somatic growth and reproduction in a limited, constant environment: organisms with determinate growth, 31
Speciation, sympatric; a simulation model of imperfect assortative mating, 9
SPIELMAN, A. (see SANDBERG, S.), 203
STABA, E. J. (see VITS, H.), 221
Stochastic evolutionary model of molecular sequences, 83
Structure, catalytic, of a mitochondrial RNA transcript, role of the *in vivo* environment in shaping of, 487
Substrate reaction kinetics during irreversible modification of enzyme activity where the modifier is not in great excess of the enzyme, 505

Swine: a macroscopic viewpoint of entropy physiology, 363
Sympatric speciation: a simulation model of imperfect assortative mating, 9
Synchrony, ovarian-cycle, among female rats; a coupled-oscillator model, 317
SZATHMÁRY, E., Natural selection and dynamical coexistence of defective and complementing virus segments, 383

Tick that transmits the agent of Lyme disease, a comprehensive multiple matrix model representing the life cycle of, 203
Toad and frog, prey-catching and predator-avoidance in; defining the schemas, 271
TOFTS, C., HATCHER, M. and FRANKS, N. R., The autosynchronization of the ant *Leptothorax acervorum* (Fabricius): theory, testability and experiment, 71
TRAINOR, L. E. H. (see LUO, L.), 83
Travel time, patch estimation via memory windows and, 243
TSOU, C.-L. (see ZHAO, K.-Y.), 505

Vaccination by in-feed delivery of oocysts; modelling coccidial infection in chickens, 407
